Shankhadeep Das

Experience

JUL 2021–PRESENT
NodeJS Backend Developer • SoluLab Inc.

JUL 2020–JUN 2021
Trainee Backend Software Developer • GeoTech Infoservices Pvt. Ltd.

JAN 2020–JUN 2020
Internship • Intern • GeoTech Infoservices Pvt. Ltd.

Current Responsibilities

Currently, I am working as a NodeJS Backend developer and I am responsible for creating scalable DB schema as well as code structures. Also in some projects I might need to fix pre-existing issues and coming up with easy and feasible solutions or hotfixes.

Projects

1. **SOSH –** This is banking app along with social interaction. Users can create and there own groups and raise money or something, and can payout that money to someone or to some organization or to some other's group. It has direct bank integration and users can transact money via wallet or directly from bank.

2. **Collection Valuation –** This project is about Coin and Bank Note marketplace where people can list there the old coin collections for sale. It has AI/ML services that will identify the true value of the coin or bank note on picture upload.

3. **NFTBlockchain –** It's a project of NFT Marketplace and Crypto social medial. People can create or buy NFTs, at the same time they can enjoy the social connectivity via posts, live streaming, chatting etc.

4. **StockPiile –** This project is all about selling, bidding and buying platform of old Champagne you have.

5. **Pricing Tool –** The idea behind this one was to simulate the market price. Organizations can upload their costing data and stuff or can provide any API for data and they can create formulas to simulate the costing, selling price, margin etc.

6. **Real Fantasy Football (RFT) –** The idea behind it is to create your fantasy football team. I mostly worked on a new feature addition RFT subscription (with Razor Pay & Apple Pay), data feed, and player point calculation.
